Running the Game

Run the executable JAR file by double-clicking it or using the command:
`java -jar UNO_PROJECT.jar`

The main game window will appear.

Starting a New Game

1. Choose the number of **human players** and **computer players**.
2. Click **Start Game** to deal hands and initialize the first round.

Gameplay Overview

- Players take turns matching the top card on the discard pile by **color** or **number/type**.
- If a player cannot play a card, they must **draw a card**.
- Special cards have unique effects:
    - **Skip:** Next player misses a turn.
    - **Reverse:** Changes play direction.
    - **Draw One / Draw Five / Wild Draw Two:** Next player draws cards.
    - **Wild / Wild Draw Color:** Allows the player to select the next color.
    - **Flip:** Flips hands and changes play direction if in dark side.

Features

- **Undo / Redo:**
    - Undo your last action using the **Undo button**.
    - Redo actions you've undone using the **Redo button**.
- **Replay:**
    - Watch a replay of the game's moves from the beginning.
- **Save / Load:**
    - Save your game to a `.ser` file to continue later.
    - Load a previously saved game via the **Load button**.
- **Scoreboard:**
    - Displays the scores of all players. Updates after each round.
- **AI Players:**
    - Computer players make decisions automatically.

Winning the Game

- The game continues until a player reaches the **winning score (500 points)**.
- Scores are calculated from the remaining cards in other players' hands.
